

TFS650

A modern take on a classic fire, this square-style freestanding fireplace is ideal for smaller living spaces wanting high-impact flames and better home performance.

FREESTANDING WOOD FIREPLACE

✓ ULTRA LOW
EMISSION BURNER

Better Home Performance

Direct Vent Flue Technology achieves greater home performance with better suitability for modern homes.

Generous Window

The pared-back design of the firebox makes room for a large viewing window for maximised flame viewing.

Your Base, Your Way

Elevate this fireplace with an Escea Concrete Plinth or Steel Base, or place it on your own custom base design.

GLASS VIEWING AREA	605w x 483h mm
FIREBOX VOLUME	54L
FLOOR PROTECTOR	Required - 872w x 926d mm
MIN. CEILING HEIGHT FROM APPLIANCE	1410mm

INSTALLATION

Base Requirements

Designed to be installed on an Escea Plinth or Base, or a custom designed base solution.

Installation Height

Elevate the fireplace base 300mm above a combustible floor. At this height, only a continuous, non-combustible floor protector is required. Lowering the fireplace will require an insulating hearth.

Flue System

This fireplace uses a Direct Vent Flue system, taking no air from inside the building for combustion. Flue offsets are available for vertical flue path changes in direction.
